

Woodturning Kit

- **An ideal starter pack for beginners**
- **Helps you obtain a professional and hardwearing finish quickly**
- **Full instruction leaflet included**
- **Easy to use**

Product use

Liberon Woodturning Kit is all you need for the perfect finish on turned wood. Ideal for beginners the starter pack contains everything you need to achieve a professional looking finish.

Preparation

The key to a good finish is careful surface preparation. The piece to be finished should be sanded to a very smooth surface. Start with a medium grade abrasive such as 120 garnet paper, follow with grade 220 and finish with 320 on open grained wood such as oak or pine, and 400 on closer grained wood such as fruit woods. Use the Tack Cloth supplied to thoroughly clean the surface of dust.

Applying the Woodturner's Lathe Polish

Woodturner's Lathe Polish seals and finishes turned woodwork in one easy step. Shake the can thoroughly. Apply sparingly with the Woodturner's Safety Cloth while the lathe is stationary. Allow to dry for 10-15 minutes and then polish at 1000 rpm or above, holding the Woodturner's Safety Cloth firmly against the work. Very porous woods may require more than one coat. To achieve the depth and warmth of wax use the Liberon Woodturning Stick.

Applying the Woodturning Stick

The stick should be applied to the wood as the lathe is running, using light pressure and moving sideways at a constant rate so as to apply a thin and even layer of wax. The wax is then buffed with the Liberon Woodturner's Safety Cloth.

Colouring

Colouring dramatically increases your scope in woodturning and many first class turned objects are a fine balance between expert turning and imaginative colouring. Colour using Liberon's Palette Wood Dyes. Dyes should always be applied to bare wood before any other finish is applied.

Safety

Apply and buff all your finishes on the lathe using the Liberon Safety Cloths as, unlike cloths containing strong threads, the Safety Cloth will tear rather than become entangled in the chuck, therefore reducing the risk of entrapping the fingers. For the same reason do not use Steel Wool on the lathe. Only use paper abrasives.

Packaging

Two Liberon Woodturner's Safety Cloths, one Liberon Woodturner's Lathe Polish, one tack cloth, one Woodturning Stick

Important: Always test products on a spare surface or inconspicuous area for compatibility and end result.
